

PROJECT REPORT

TASK -1

DIGITAL LITERACY INFOGRAPHIC

For this task, I created a digital literacy infographic using Canva. The main objective was to design a visually appealing and informative slide that explains the concept of digital literacy and its importance for students. My infographic covered key topics such as what digital literacy is, useful digital tools, safe internet practices, and maintaining a professional online presence. I used a modern layout with a balanced combination of images, icons, and short bullet points to make the content easy to understand and visually engaging. Canva provided a variety of templates and design elements, which helped me create a clean and attractive slide. One challenge I faced was maintaining the right balance between content and design. Adding too much text made the slide look cluttered, while too little reduced clarity. Also initially I was finding difficulty in setting colour composition for the infographic which I then solved using the theory of colour wheel . Overall, this task helped me improve my creativity, design skills, and ability to present information in a concise and effective way.

TASK 2

DIGITAL PORTFOLIO

In this task, I built my digital portfolio by creating and updating my profiles on GitHub, LinkedIn, and an additional platform. The objective was to develop a professional online presence that can be used to showcase my skills, projects, and academic progress. On GitHub, I created my profile and added a README file that includes my basic details such as name, branch, and learning goals.

Additionally, I also learnt various other things on github. This platform will help me store and present my projects in an organized manner. On LinkedIn, I completed my education section by adding my university details, which is important for building a professional identity. In LinkedIn I also added other details completing my profile. I also explored another platform to understand its relevance in learning and networking. I created my profile on Kaggle as well.

These platforms are widely used by students and professionals for career development. In the future, I plan to regularly update my profiles with new projects, achievements, and skills. This task helped me understand the importance of maintaining a professional digital presence from the beginning of my academic journey.

TASK 3

PLATFORM EXPLORATION AND GOOGLE FORM

In this task, I explored both coding practice platforms and collaboration tools. I created an account on a coding platform such as HackerRank and completed a beginner-level problem. This helped me understand how these platforms are used to improve problem-solving skills and build programming knowledge. In addition, I created a Google Form titled “Digital Literacy Awareness Quiz,” which included five questions covering topics like internet safety and digital tools. I shared the form link with my friends to get response , then viewed the responses using Google Sheets, which demonstrated how data can be collected, organized, and analyzed efficiently. This task was very useful as it introduced me to important digital platforms that support academic learning. Coding platforms help in improving logical thinking and programming skills, while tools like Google Forms and Sheets are essential for collaboration and data management. I believe these tools will play a significant role in my academic journey and help me become more efficient in handling digital tasks.

TASK 4

COMMUNICATION SCENERIO

A common situation where poor digital communication causes problems is in group projects. For example, a student might send a message like “I’ll handle the slides” without specifying which part or by when. Other group members may assume the entire presentation is covered, which will lead to the missing content or last-minute confusion before submission. This lack of clarity can result in incomplete work and lower grades for the whole group.

This issue could have been avoided with clearer communication. The student should have mentioned exactly which slides they would prepare and set a deadline. Using shared documents and regular updates would also help everyone stay informed. Clear, specific, and timely communication is essential to avoid misunderstandings in digital interactions.

TASK 5

ANALYSIS OF THE TOPIC

While researching cybercrime and online safety, what surprised me most was how easily scammers can trick people using UPI and online payment apps. I did not realize that even something as simple as scanning a QR code or entering a

UPI PIN could lead to instant financial loss. Many victims are careful with passwords and accounts but still fall for these small, seemingly harmless tricks.

This made me realize that awareness and caution are just as important as technology itself in protecting oneself online.

As a result of this research, I have decided to change one personal habit: I will never enter my UPI PIN or share sensitive banking information to receive money from anyone, even if it seems urgent or official. I will also double-check all links and QR codes before using them. This small change will help me avoid becoming a potential target of online fraud.
